

Vancouver Style

In citations, there are two places which the author needs to pay attention:

1. Format for in-text citations
2. Format for end references

In Vancouver style, the in-text citations will be appeared within the sentence or at the end of the sentence. For example;

The number of references should have more than 5 categories for 8 pages article and more than 20 categories for 10 pages article [1]. Please author must ensure that every reference cited in the text is also presented in the reference list [2]. Any references cited in the abstract must be given in full. The references will be cited sequentially in the text [3]. Unpublished results and personal communications are not recommended in the reference list [4]. Authors should not refer any document that still have not been published and do not separate as category of document to be utilized as reference [5]. If there will have the reference details more than 1 line, it will be allowed to continue at the next line.

Moreover, the number of in-text citation must be relevant to the number of the end reference (concerning to the numerical order). For example;
